

GeoVision Brings Higher Security To Your Assets

GeoVision Proximity Cards With GID (GeoVision Identifier) Enhances Your Security

GeoVision offers proximity cards with GID (GeoVision Identifier), a proprietary card format that is compatible with GeoVision readers, to protect your precious assets. This secure card format can prevent the duplication of cards in highly sensitive environments such as banks, prisons and schools.

GeoVision provides a cost-effective solution for access control management while enhancing security for all applications.

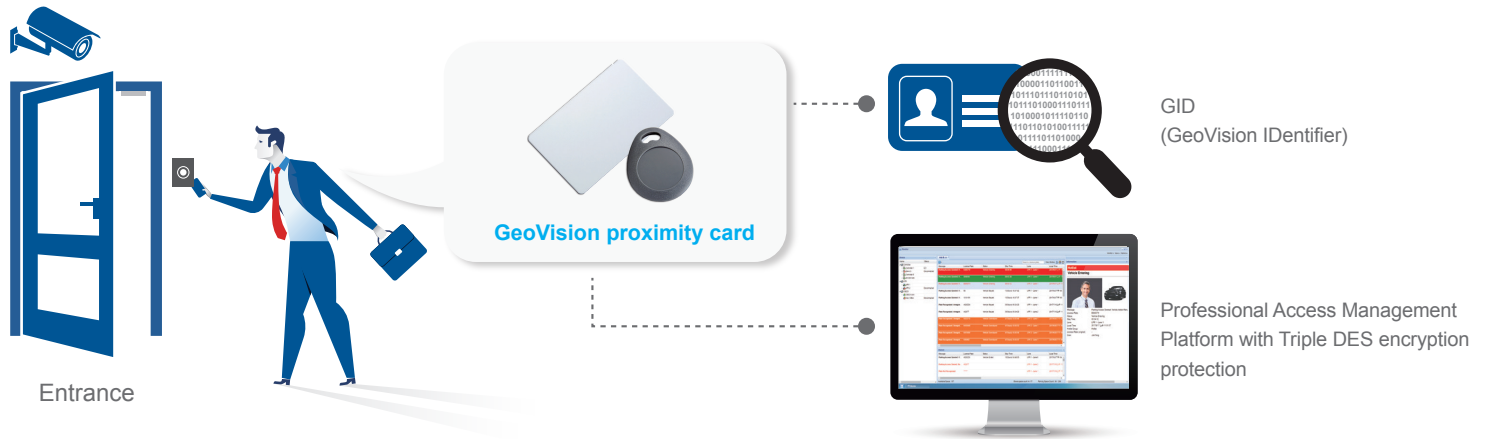

Key Benefits:

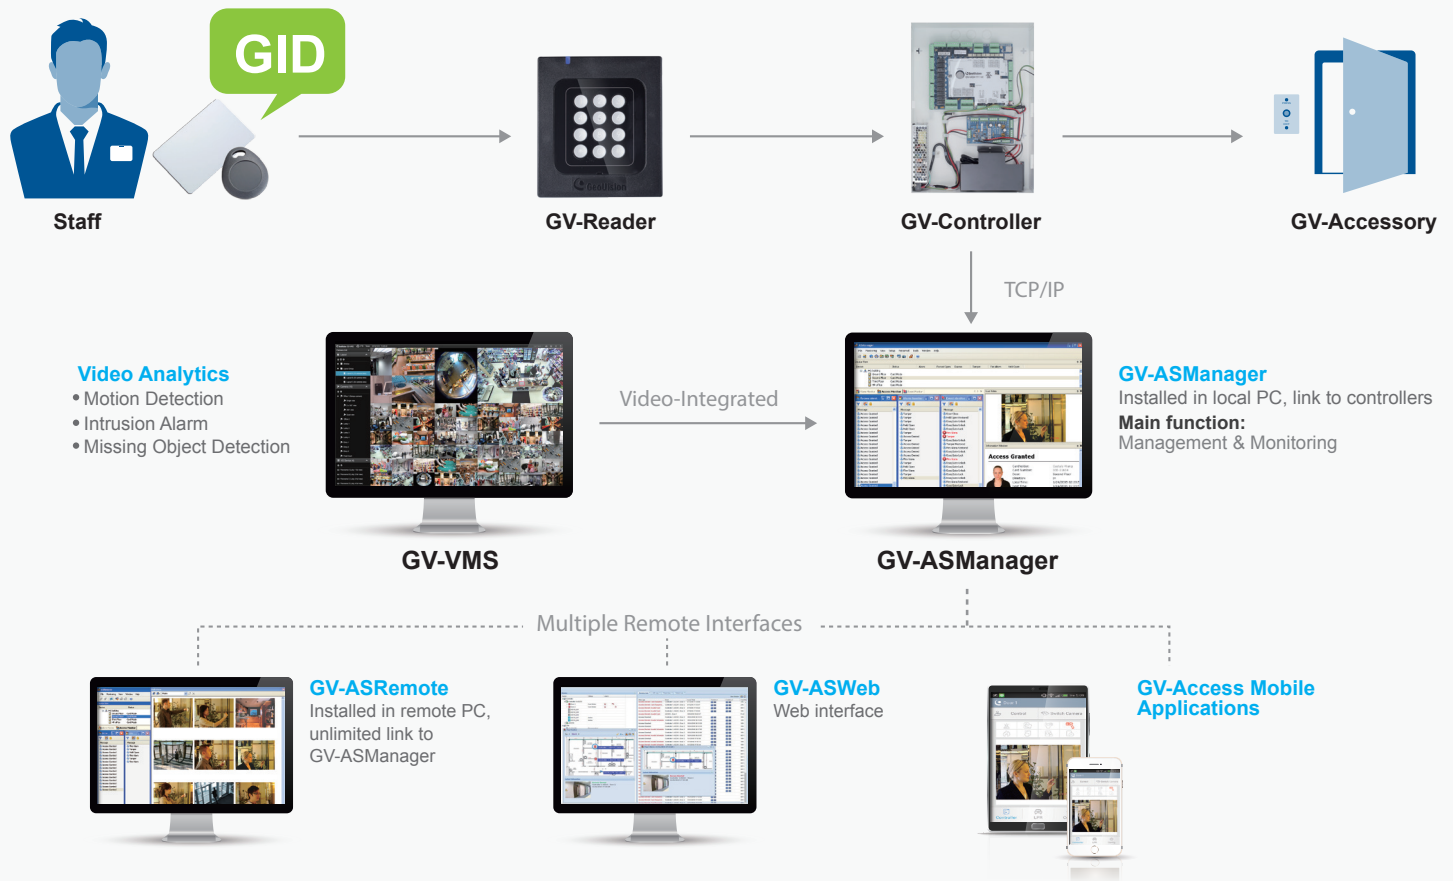

- GV-AS ID Card/ Fob offers 13.56 MHz technology with ISO 1444-3A
- Supports formats up to 64 bits
- Compatible with GV-Readers
- Prevent duplication of cards
- Multilevel administration access

Application Scenarios

How It Works?

GV-AS ID Card

Description	13.56 MHz proximity card.
